01 — BRAND STORY & POSITIONING

Who We Are

Digital Influx Dreamlabs Ltd is an AI product engineering and automated systems agency built to give small and medium-sized businesses an unfair advantage. We are a sister company to Digital Influx Academy, and we operate as a fully independent company — with a distinct mission, identity, and client focus.

Where most AI agencies serve enterprise clients with enterprise budgets, Dreamlabs was built for the businesses that actually build the physical world: tradespeople, manufacturers, logistics operators, contractors, and the SMEs that keep industries moving. We bring the same capabilities as the big firms, at a price point that makes sense for real businesses.

What We Do

Dreamlabs operates across two service pillars:

01 AI Product Engineering

Free auditing, design, engineering and deployment of AI-powered products. We identify where AI can create genuine value in your business and we build it — end to end.

02 Automated Systems

We identify operational bottlenecks and solve them with custom automated systems. Every client receives a bespoke application — either to run the automated system directly or to manage it in a way that is clear, accessible, and user-friendly.

Why We Exist — The Dream

"Dreamlabs" is not just a name. It is a promise. Our entire purpose is to make the dreams of SMEs and startups achievable — to give them access to technology and capability that was previously reserved for companies ten times their size.

We believe every business, regardless of size or sector, deserves the kind of advantage that AI can deliver. We exist to close that gap.

Our Ideal Customer

Primary: SMEs within blue collar industries — construction, manufacturing, logistics, facilities, trades, and related sectors.

Secondary: Startups and SMEs across all sectors who are ready to leverage AI as a growth driver.

Our Competitive Edge

Dreamlabs is powered by an in-house talent engine through Digital Influx Academy. This means we do not source external talent — we develop it. That model allows us to offer enterprise-grade work at accessible pricing, without compromising on quality.

— Enterprise capability. Human-scale pricing. Built for the businesses that build the world.

02 — LOGO USAGE

Logo System

The Dreamlabs logo system consists of three lockups: the Primary Logo (full wordmark), the Short Logo (DLabs), and the Icon Mark. Each exists in three approved background variants. Use only approved combinations — never place the logo on unapproved backgrounds or alter its colours.

Primary Logo — DreamLabs

The primary wordmark is the default logo for all brand touchpoints. Use on white/Off White backgrounds as the standard. Use the dark navy version for hero sections, decks, and dark-background contexts.

Off White background — primary use

Violet Ray background

Deep Navy background

Short Logo — DLabs

Use the DLabs short logo only when space genuinely does not permit the full wordmark — for example, mobile headers, favicon contexts at medium scale, or tight horizontal layouts. It is not a stylistic preference, it is a practical fallback.

Off White background — primary use

Violet Ray background

Deep Navy background

Icon Mark

The icon mark — the "a" letterform with the flask detail and rising bubble trail — is used at small sizes where the full wordmark would become illegible. Approved contexts include app icons, social media profile images, watermarks, and favicons. Never use the icon mark as the primary brand identifier where space allows the full logo.

Off White background

Violet Ray background

Deep Navy background

Logo Usage Rules

- Always use an approved logo file. Never recreate or redraw the logo.
- Maintain clearspace equal to the height of the "D" in DreamLabs on all sides of any logo variant.

- Never stretch, skew, rotate, recolour, or apply effects to the logo.
- Never place the logo on a busy photographic background without a clear containing shape.
- Never use the icon mark and the full wordmark at the same scale in the same layout — they serve different size contexts.
- The "Dream" / "Labs" colour split in the wordmark is fixed — do not separate or alter the two-tone treatment.

When in doubt: use the Off White background primary logo. It is always correct.

03 — COLOUR SYSTEM

Colour Palette

Our colour palette is bold by design. It signals technological confidence and creative ambition — while the depth of the Deep Navy grounds everything in trust and professionalism. Use colour deliberately.

Swatch	Name	Role & Usage
	Violet Ray #8B32FF	Primary — CTAs, key highlights, interactive elements, logo primary
	Deep Navy #040F49	Primary — Backgrounds, body text on light, hero sections
	Rebecca Purple #64378B	Secondary — Supporting colour, gradients, captions, dividers
	Magenta Bloom #F0386B	Tertiary/Accent — Use sparingly. Alerts, energy, contrast moments
	Strong Cyan #00DFDF	Tertiary/Accent — Use sparingly. Tech highlights, data, digital contexts
	Off White #F4F4F8	Neutral — Page backgrounds, card fills, breathing space

Colour Usage Rules

- Deep Navy (#040F49) is the default background for hero sections and primary brand surfaces. Violet Ray (#8B32FF) is the lead accent on those dark backgrounds.
- Off White (#F4F4F8) is the only light background. Deep Navy (#040F49) is the body text colour on all light surfaces — never use generic dark greys.
- Rebecca Purple (#64378B) is the bridge colour — use it in gradients between Violet Ray and Deep Navy, or as a secondary text treatment.
- Magenta Bloom and Strong Cyan are high-energy accents. They must never appear together in the same layout element — use each independently, against dark or neutral backgrounds.
- Avoid placing Violet Ray on Off White without sufficient weight — the contrast is adequate but pairing with bold type is recommended.

Pairing rule: Magenta Bloom and Strong Cyan must never share the same element or adjacent elements in a layout. Used separately against Deep Navy, they are stunning.

04 — TYPOGRAPHY

Type System

Our typography pairing is designed to balance credibility with warmth. Montserrat brings structure, authority, and a visual nod to Digital Influx Academy. DM Sans brings the human touch — readable, versatile, and characterful across all platforms.

Font Pairing

Montserrat — Headings, display text, logo wordmark. Available on Canva, Figma, Google Docs, Google Slides.

DM Sans — Body copy, captions, UI labels. Available on Canva, Figma, Google Docs, Google Slides.

Type Scale

Role	Font	Weight	Sample
Logo / Display	Montserrat	ExtraBold	DREAMLABS
Heading 1	Montserrat	Bold	Section Title
Heading 2	Montserrat	SemiBold	Sub-heading
Body	DM Sans	Regular	Body copy and paragraphs
Body Emphasis	DM Sans	Medium	Highlighted body text
Captions / Labels	DM Sans	Light	Captions and labels

Typography Rules

- Montserrat should always be used at SemiBold or above for headings — never at Regular weight in a display or heading context.
- DM Sans body copy should be set at Regular or Medium. Light is reserved for captions and supporting labels only.
- Do not mix both fonts at the same visual weight in the same element — Montserrat leads, DM Sans supports.
- All caps (uppercase) is permitted for Montserrat in logo, labels, and section headers only. Avoid all caps in body copy.
- Minimum body text size: 10pt in print, 14px on screen.

Platform note: Both Montserrat and DM Sans are available natively in Canva and Figma. For Google Docs, add them via Google Fonts if not pre-installed. Both fonts are free and open-source.

05 — TONE OF VOICE

How We Sound

Dreamlabs speaks like a brilliant friend who happens to know AI. We come to you. We speak your language. We do not dazzle you with jargon — we solve your problem and make you feel like you have an unfair advantage.

Our tone is warm and direct. We are confident without being arrogant, technical without being alienating, and optimistic without being hype-driven. We treat our clients as intelligent adults who deserve clarity — not a sales pitch.

Brand Character Statement

"The brilliant friend who happens to know AI. They come to you, speak your language, and do not dazzle you with jargon — they just solve your problem and make you feel like you have got an unfair advantage."

Three Brand Pillars

Transformative

We turn bottlenecks into breakthroughs. Every engagement starts with a real problem and ends with a measurable result.

Accessible

Enterprise-grade capability at a human-scale price point. We built the model specifically so that pricing never has to be a barrier.

Inventive

We build for your specific problem, not a generic one. Every system, every product, every solution is designed from the ground up.

Voice Principles

Confident, not arrogant. We know what we are doing. We do not need to shout about it.

Plain language first, technical where it adds clarity. If a plumber would not know what it means, explain it once.

Industry-fluent. Terms like bottlenecks, leverage, deployment, and automation are part of our vocabulary — used with purpose, not stacked for effect.

Warm and direct. We speak like a trusted specialist, not a salesperson. Short sentences. Active voice.

Optimistic without the hype. We believe in what AI can do for SMEs — and we say so clearly, without overpromising.

What We Never Sound Like

- Overly corporate — no strings of buzzwords, no hollow mission statements
- Condescending — we do not talk down to blue collar clients or assume they need everything simplified
- Overly casual — we are warm, not unprofessional
- Hype-driven — we do not promise magic; we demonstrate value

Language rule: Any single piece of copy should pass the "plumber test" — if a busy SME owner cannot grasp the core idea in two readings, rewrite it.

Brand Application Rules

[PLACEHOLDER]

This section will be completed collaboratively and will include:

- Visual Do's and Don'ts across all touchpoints
- Colour misuse examples
- Typography errors to avoid
- Tone of voice examples (correct vs incorrect)
- Logo misuse reference
- Approved asset combinations
